Inverter RS Smart Solar 48/6000

Inside the Inverter RS 48V 6000VA

Off-Grid solar inverter

The Inverter RS Smart Solar 48/6000 is a 48 V 6 kVA Inverter with 450 VDC 4 kWp PV input. It is used in off-grid solar applications where AC power is required.

Combination of an inverter, bi-directional DC-DC converter and MPPT

The inverter produces a perfect sine wave, able to supply high powered appliances. It is supplied by a bidirectional DC-DC converter, that can either charge the battery when excess solar power is available or convert from the battery when it is needed.

Wide MPPT voltage range

80 - 450 VDC, with a 120 VDC PV startup voltage.

Light weight, efficient and quiet

Thanks to high frequency technology and a new design this powerful inverter weighs only 11 kg. In addition to this it has an excellent efficiency, low standby power, and a very quiet operation.

Display and Bluetooth

The display reads battery, inverter and solar charge controller parameters. The same parameters can be accessed with a smartphone or other Bluetooth enabled device. In addition, Bluetooth can be used to set up the system and to change settings with VictronConnect.

VE.Can and VE.Direct port

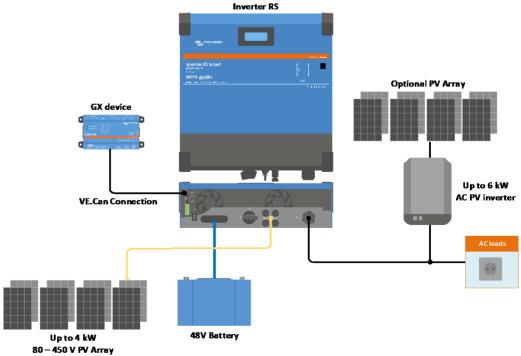

VE.Can connection to a GX device for system monitoring, data logging, and remote firmware updates. VE.Direct connection to a GlobalLink 520 for remote data monitoring.

Built in PV isolator

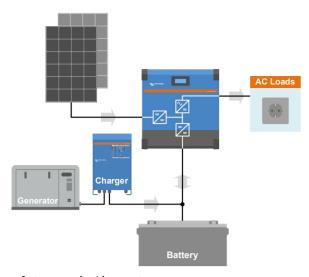

Both parallel PV strings connected to the MC4 plugs can be safely isolated with the large built-in switch on the bottom of the unit.

I/O Connections

Programmable Relay, temperature sensor and voltage sensor connections. The remote input can also be configured to accept the Victron smallBMS.

System example with generator

Add a generator and external battery charger if additional power is needed.

VRM Portal

When the Inverter RS is connected to a GX device with internet connection, you can access our free remote monitoring website (VRM). This will display all your system data in a comprehensive graphical format. System settings can be changed remotely via the portal. Alarms can be received by email.

	NVERTER
DC Input voltage range	38 – 62 V ⁽⁶⁾
	Output voltage: 230 VAC ± 2 %
Output	Frequency: 50 Hz ± 0.1 % (1)
	Maximum continuous inverter current: 25 Aac
6	Increases linearly from 4800 W at 46 VDC
Continuous output power at 25 °C	to 5300 W at 52 VDC
Continuous output power at 40 °C	4500 W
Continuous output power at 65 °C	3000 W
continuous output power at 05°C	9 kW for 3 seconds
Peak power	7 kW for 4 minutes
Short-circuit output current	45 A
Short-circuit output current	
Maximum efficiency	96.5 % at 1 kW load
	94 % at 5 kW load
Zero load power	20 W
Low Battery shutdown	37.2 V (adjustable)
Low Battery restart	43.6 V (adjustable)

48/6000

Inverter RS Smart Solar

- 1) Can be adjusted to 60 Hz.
 2) Protection key: a) output short circuit b) overload c) battery voltage too high d) battery voltage too low e) temperature too high f) 230 VAC on inverter output g) Solar earth leakage.
 3) Programmable relay which can be set for general alarm, DC under voltage or genset start/stop function. DC rating: 4 A up to 35 VDC and 1 A up to 70 VDC.
 4) Normal operation is regulated to 18 A, with maximum reverse polarity protection 20 A.
 5) MPPT operating range is also constrained by battery voltage PV VOC should not exceed 8x battery float voltage, e.g. a 50V battery voltage maximum should have 400 V maximum PV array see product manual for further information.
 6) Minimum start-up voltage is 41 V. Inverter shutdown can be set as low as 32 VDC, but may shut down on low AC output voltage (due to load). Over-voltage disconnect is 65.5 V.
 7) The Charger set-point (float and absorption) can be set to max 60 V. The output voltage at the charger terminals can be higher, due to temperature compensation as well as compensation for voltage drop over the battery cables. The maximum output current is reduced on a
- temperature compensation as well as compensation for voltage drop over the battery cables. The maximum output current is reduced on a linear basis from full current at 60 V to 5 A at 62 V. The equalization voltage can be set to max 62 V, the equalization current percentage can be set to max 6 %.
- 8) Maximum charging current from AC and DC sources varies with AC and DC voltages. See product manual for more detailed limitation specifications due to these variables.
- specimizations due to these variables.

 9) AC coupled solar charging requires an external PV inverter to be connected on a circuit at the AC output of the Inverter RS Solar.

 ** Note only the VE.Can port can be used for connection to a GX device. The VE.Direct port supports the GlobalLink 520.
